

## St Thomas' Bradwell

Top lights in the nave roof, changed to LED but too bright and dazzling, presently aimed at the walls that makes the nave look like a village hall and brighter than the chancel. They need to provide light to the congregation, they need spotlights with anti-glare honeycomb screens.

Not seen behind the pipe is the halogen flood up lights that need changing to LEDs.

The spot lights that have been fitted with LED bulbs in the chancel are too dazzling. May need fittings with grills or more spots at a more acute angle. The area around the choir is too dark.

St Thomas' Bradwell

We would like a small LED pencil spot to light the cross on the altar during the times the church is open and the other lights are off (day and dusk)

Christmas 2016

## St Thomas' Bradwell

Below are the under gallery (area at the back of the nave) track halogen up lights that have been fitted with LED versions that are not bright enough, may need new fittings that will fit the existing track.

Below are the Chapman Room (room at the back of the church) track halogen up lights that need an LED version that will fit the existing track

LED spotlights above kitchen area
