

INTRODUCING THE AFS EWI NEST BOX

A simple, low-cost, solution for use in thermal upgrade of an existing property or incorporating External Wall Insulation (EWI) into a newbuild property.

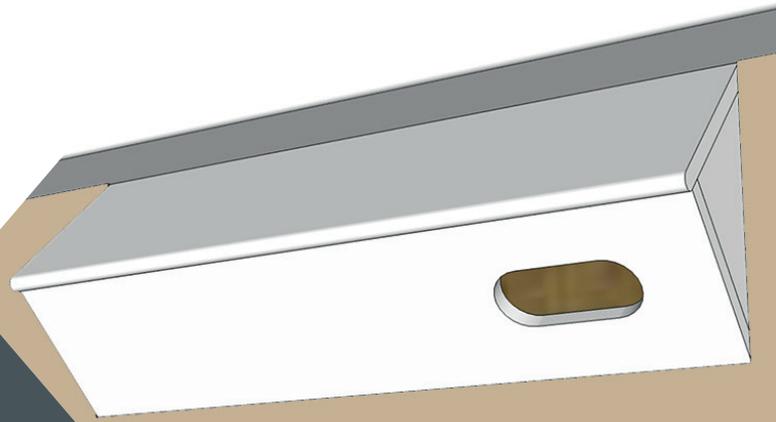

EWI is usually comprises polystyrene or mineral fibre of varying thickness, finished with a render, brick/stone effect or cladding. The EWI box sits within this layer and has an unobtrusive entrance clear of the finish. The final surface, which provides both the aesthetic and weatherproofing functions of the wall, is usually a coloured render but could also be a brick effect or other specialist finish. EWI boxes can be either rendered in or painted to match this finish.

Nesting solutions for external insulation

The EWI Box provides a home for Swifts and other cavity nesting birds, without compromising the integrity or appearance of external insulation. It is designed to be placed under the soffits or eaves of buildings.

- Made of 100% uPVC for thermal stability and durability
- Compliant with BS42021
- Easy installation
- Can be painted to match external walls
- Upgrading existing build or new build
- For Swifts and small cavity nesting birds

- Dimensions: L350mm D150mm H126mm

All Afs
products are
produced
in the UK

Installation

The EWI Box is designed for quick, easy installation:

- Under eaves or soffits
- Higher is better, no less than 4 metres above ground (no maximum height)
- If space allows, spread them out - 1 metre spacing but can be closer
- A clear flyway in front

The box is embedded in the wall insulation, no additional fixing required

Always adopt appropriate safety
measures during installation at the
recommended height
